

Dura Lube Advanced Transmission Treatment

USE IN AUTOMATIC TRANSMISSIONS ONLY.

WITH SR₃ TECHNOLOGY

Dura Lube Advanced Transmission Treatment is a precision blended transmission fluid containing synthetic seal conditioning additives.

It conditions seals and protects against leaks associated with seal failure.

Loss of fluids can damage a normal transmission and cause slippage or even seizure.

DIRECTIONS:

Add one 8 ounce bottle of Dura Lube Advanced Transmission Treatment to a normal size automatic Transmission. For larger or smaller transmissions, add one ounce per quart of automatic transmission fluid.

Do not overfill. After adding Dura Lube Advanced Automatic Transmission Fluid, continue to maintain your vehicles transmission fluid according to manufacture's specifications.
